

# Learn How to Prolong the Productive Life Span of Mission-Critical Capital Assets

*On-site Reliability Workshops available from leading proponent of world class maintenance management practices*

*Workshop attendees learn in an intimate setting how to transition from a reactive to a proactive maintenance strategy.*

A world class maintenance operation differs from a run-of-the-mill operation only by the degree to which it achieves its primary function: *to ensure that the right amount of equipment is ready and available at a reasonable cost.* Quality maintenance practices keep operations running smoothly and profitably. Poor maintenance practices can bring productivity to a halt and seriously affect a company's bottom line.

That's why we've taken our most knowledgeable operations personnel and paired them with the best of Ivara's reliability courses to offer you our new comprehensive on-site Reliability Workshops.

These popular workshops can be a great starting point for educating your workforce and getting everyone in your organization on board with reliability.

- Reliability – Preparing for Tomorrow's Maintenance World
- Lean Maintenance
- Best Practices in Maintenance and Reliability
- Developing a Balanced Scorecard with Leading and Lagging Indicators
- Reliability as a Corporate Strategy
- Planning in a Proactive Environment – Getting to the Right Work
- Introduction to RCM

# USCCG will work with you to customize an approach to jump start your journey to world class reliability.

*Ensuring a strong strategic vision is a fundamental step in improving, and then sustaining asset performance.*

From Lean Maintenance and KPIs to formulating asset reliability as a strategy within your company, these fully customized workshops will teach you and your team what it takes to transition from reactive to proactive maintenance. You'll gain an understanding of best practices and how world class maintenance management, total productive maintenance (TPM), Lean maintenance, and other methodologies fit with reliability centered maintenance to drive measurable results without significant capital investment.

On-site Reliability Workshops are typically one to two days in length, and allow you to choose the content most applicable to the current state of your plant or business. The best part is that the workshops take place at your facility, reducing overall costs by eliminating travel time and expense. The cost per on-site workshop starts at \$3000 per day for up to 20 participants.

USCCG stands ready to help your organization implement the appropriate methodology, deploy enabling tools, and provide reliability expertise to prolong the productive life span of mission-critical capital assets.

If you'd like to learn more about our asset management capabilities and how they can be used to optimize your company's performance, please call us at (800) 888-8872 or visit our web site at [www.usccg.com](http://www.usccg.com).

*First we make it work. Then we make it last.®*
